

PhysioHome Brand Guideline

Full Brand Identity, Visual System, Voice, UI Kit, and Application Guide

Brand Name: PhysioHome

Tagline: Care at Your Doorstep

Document Type: Full Brand Guideline

Product Category: Home-based physiotherapy and rehabilitation service platform

Primary Users: Patients, caregivers, physiotherapists, administrators, and healthcare partners

Reference Direction: Based on the approved onboarding and home-screen visual direction

Core Visual Language: Navy + Teal + White + Soft Aqua + Warm Cream

Brand Personality: Professional, calm, caring, trustworthy, accessible, modern

1. Brand Overview

PhysioHome is a healthcare technology brand that connects patients with verified physiotherapists for professional home-based care. The brand exists to make physiotherapy easier to access, safer to book, and more comfortable for patients who may be recovering from injury, surgery, stroke, chronic pain, or mobility challenges.

The brand identity is built around a clear emotional and functional promise: patients should feel that they are receiving trusted professional care without leaving the comfort of home. The visual system must therefore balance clinical credibility with warmth. It should not feel like a cold hospital system, and it should not feel like a casual delivery app. It should feel calm, organized, human, and reliable.

The approved visual direction uses a strong navy-and-teal healthcare identity. Navy gives the brand authority, structure, and trust. Teal communicates healing, freshness, and action. White keeps the app clean and readable. Soft aqua creates gentle healthcare surfaces. Warm cream connects the experience to the comfort of home.

2. Brand Strategy

2.1 Brand Positioning

PhysioHome is positioned as a trusted home physiotherapy platform that helps patients book verified physiotherapists for professional recovery and rehabilitation support at home.

It sits at the intersection of healthcare, home care, wellness, and digital convenience. The brand must therefore communicate safety and simplicity at the same time.

2.2 Positioning Statement

PhysioHome helps patients access verified physiotherapy care from the comfort of their homes by making provider discovery, booking, payment, and session tracking simple, safe, and reliable.

2.3 Brand Promise

Professional physiotherapy care, safely delivered at your doorstep.

2.4 Core Message

Book verified physiotherapists near you for home-based treatment, recovery, and mobility support.

2.5 Brand Differentiator

PhysioHome is not only a booking app. It is a trust-first healthcare access platform. The brand must emphasize verified experts, care at home, easy booking, secure payments, and reliable session support.

3. Brand Values

Trust

Patients must feel safe inviting a physiotherapist into their home. Every part of the brand should reinforce verification, professionalism, security, and accountability.

Care

The brand should feel human and supportive. The product serves people who may be in pain, anxious, elderly, recovering, or caring for loved ones. The tone should always be respectful and reassuring.

Accessibility

The app must be easy to understand. The visual design, language, navigation, and interactions should support elderly users, caregivers, and people who may not be highly technical.

Professionalism

PhysioHome is a healthcare brand. It must look polished, credible, organized, and consistent. It should avoid casual language or visuals that weaken medical trust.

Convenience

The brand should communicate that booking care at home is simple, fast, and manageable without making unrealistic claims.

4. Brand Personality

PhysioHome should feel calm, professional, caring, reliable, clean, modern, and human-centered.

It should not feel loud, childish, overly playful, luxury-only, aggressive, cluttered, or cold.

Personality Keywords

- Calm
 - Professional
 - Trustworthy
 - Caring
 - Safe
 - Human
 - Clean
 - Accessible
 - Reliable
 - Modern
 - Supportive
 - Warm
-

5. Official Brand Color System

The PhysioHome brand must follow the color combination shown in the approved UI screens. The system is built around teal for healthcare action, navy for trust and readability, soft aqua for icon and support surfaces, warm cream for home comfort, and white for clarity.

The brand should not drift into bright blue, purple, neon green, black-heavy layouts, or random healthcare palettes. Consistency is essential.

6. Primary Brand Colors

Color Name	Hex	Role	Primary Usage
Primary Teal / Deep Cyan	#138A8A	Main brand accent	CTAs, active states, highlights, links, key icons
Primary Navy	#0B2545	Main trust color	Headings, logo text, body copy, labels, navigation text

6.1 Primary Teal / Deep Cyan — #138A8A

This is the most recognizable PhysioHome accent color. It represents healing, action, freshness, and care. It should be used wherever the user needs to take action or notice an important brand highlight.

Use this color for primary buttons, active onboarding dots, active navigation icons, headline emphasis words, text links such as “Skip,” “Log in,” and “View All,” service icons, selected states, and important visual highlights.

This color should not be used for long paragraphs because it may reduce readability. It should work as an action and emphasis color, not the main reading color.

6.2 Primary Navy — #0B2545

This is the trust foundation of the brand. It gives PhysioHome a serious healthcare presence and makes the interface feel professional.

Use this color for main headings, section titles, body copy, logo wordmark text, feature labels, form labels, provider names, booking details, and important UI text.

Navy should be the dominant text color. Do not replace it with pure black unless required by a specific accessibility or platform limitation.

7. Secondary and Support Colors

Color Name	Hex	Role	Primary Usage
Light Teal Tint	#E6F4F4	Soft healthcare surface	Icon backgrounds, feature cards, soft panels
Muted Teal	#5FA7A7	Secondary teal support	Icon strokes, tagline, quiet decorative accents
Soft Cream	#F6ECDD	Warm home background	Onboarding, hero sections, image overlays
Pure White	#FFFFFF	Clean app surface	Cards, app background, forms, bottom sections
Light Gray	#D9DDE3	Inactive neutral	Inactive dots, borders, dividers, disabled states
Muted Slate	#707588	Secondary text	Helper text, metadata, inactive labels

7.1 Light Teal Tint — #E6F4F4

Use this as a supportive background, especially behind feature icons and soft information cards. It should feel gentle and clean.

7.2 Muted Teal — #5FA7A7

Use muted teal for quieter brand moments such as the tagline, icon strokes, and subtle visual accents. It should support the main teal without competing with it.

7.3 Soft Cream — #F6ECDD

Use soft cream for warmth and home comfort. It works especially well in onboarding screens, hero sections, welcome areas, and marketing designs that use home-care photography.

7.4 Pure White — #FFFFFF

Use white for clean app surfaces, form areas, cards, lists, and content containers. White creates the clarity needed in healthcare interfaces.

7.5 Light Gray — #D9DDE3

Use light gray for inactive states, subtle borders, onboarding inactive dots, dividers, and disabled controls. Do not use gray for critical information.

8. Functional UI Colors

Functional colors should be used only for system feedback. They should never compete with the main teal and navy identity.

Purpose	Hex	Usage
Success Green	#22C55E	Payment success, completed booking, approved status
Warning Amber	#F59E0B	Pending payment, pending verification, caution states
Error Red	#EF4444	Failed payment, cancelled booking, form errors
Notification Red	#EF4444	Small notification badge only
Info Blue	#2563EB	Informational banners only when necessary

Functional Color Rule

Functional colors must appear in small, purposeful areas. The brand should still feel teal-and-navy even when success, warning, or error states appear.

9. Color Combination Rules

9.1 Main App Combination

The default app combination should be:

- Background: Pure White #FFFFFF or very soft off-white
- Main text: Primary Navy #0B2545
- Active action: Primary Teal #138A8A
- Icon backgrounds: Light Teal Tint #E6F4F4
- Secondary text: Muted Slate #707588
- Dividers: Light Gray #D9DDE3

This combination should be used for patient screens, physiotherapist screens, and most admin dashboard views.

9.2 Hero and Onboarding Combination

The hero and onboarding areas should feel warmer than the functional app screens.

Recommended formula:

- Background: Soft Cream #F6ECDD
- Main headline: Primary Navy #0B2545
- Highlight word: Primary Teal #138A8A
- Supporting text: Primary Navy or softened navy
- CTA: Teal gradient or solid Primary Teal
- Image: Warm home-based physiotherapy photography

9.3 CTA Combination

Primary CTA buttons must use the teal family.

Recommended CTA style:

- Fill: #138A8A
- Optional gradient end: #087F83
- Text: #FFFFFF
- Icon: #FFFFFF

Use this for Book Now, Get Started, Find Available, Pay Now, Confirm Booking, Continue, and Submit Verification.

9.4 Card Combination

Cards should feel clean and soft.

Recommended card style:

- Background: #FFFFFF
- Border: #D9DDE3 or very subtle shadow
- Title: #0B2545
- Secondary text: #707588
- Icon: #138A8A
- Icon background: #E6F4F4

9.5 Navigation Combination

- Active tab: #138A8A
- Inactive tab: #707588
- Top icons: #0B2545
- Notification dot: #EF4444

9.6 Text Combination

- Main headings: Primary Navy
- Body copy: Primary Navy or softened navy
- Secondary text: Muted Slate
- Links: Primary Teal
- Highlight words: Primary Teal
- Error messages: Error Red

Do not use teal for long reading paragraphs. Do not use light gray for important text.

10. Color Hierarchy and Ratio

A balanced PhysioHome screen should follow this approximate ratio:

- 45% White or clean app surface
- 20% Soft Cream or warm image area
- 18% Navy text and structure
- 10% Primary Teal actions and highlights
- 5% Light Teal Tint support surfaces
- 2% Gray and functional state colors

This ratio preserves the approved visual identity and prevents teal from becoming overwhelming.

11. Gradients

Gradients may be used, but only in a controlled way. The brand should not use random gradients.

11.1 Primary CTA Gradient

Start: #138A8A

End: #087F83

Text: #FFFFFF

Use this for major buttons on onboarding, booking, payment, and availability screens.

11.2 Soft Background Gradient

Start: #F6ECDD

Middle: #FFFFFF

End: #E6F4F4

Use this for onboarding screens, welcome sections, calm empty states, and marketing hero areas.

11.3 Gradient Rules

Use one major gradient per screen. CTA gradients must remain teal-based. Background gradients must stay soft and should not reduce text readability.

12. Logo System

The PhysioHome logo should visually express three ideas: home, care, and recovery.

The preferred logo concept uses a house shape, a supporting hand, and a human movement or physiotherapy figure. This is suitable because it communicates care at home and physical rehabilitation.

13. Logo Components

13.1 Symbol

The symbol should include a simplified home-care mark. It may combine a roof or house outline, a hand, and a movement figure. It should be simple enough to work at small sizes.

13.2 Wordmark

The wordmark should read "PhysioHome." The recommended color treatment is:

- "Physio" in Primary Navy #0B2545
- "Home" in Primary Teal #138A8A

This treatment reinforces the brand logic: Physio represents professional clinical trust, while Home represents care delivered comfortably at home.

13.3 Tagline

The tagline “Care at Your Doorstep” may appear under the wordmark. It should use Muted Teal #5FA7A7 or a softened navy-gray. It should never overpower the main wordmark.

14. Logo Usage Rules

14.1 Preferred Logo

The preferred logo is the full horizontal lockup: symbol + PhysioHome wordmark + tagline.

Use it on onboarding screens, app headers, website hero sections, marketing posters, pitch decks, and official documents.

14.2 Compact Logo

The compact logo may use symbol + PhysioHome without the tagline. Use it in app headers, small cards, profile headers, and places where vertical space is limited.

14.3 Icon-Only Logo

The symbol alone may be used for app icons, favicons, loading screens, splash screens, watermarks, and small badges.

14.4 Clear Space

Always keep clear space around the logo. The minimum clear space should equal the height of the letter “P” in the wordmark. No text, button, image edge, or icon should enter this space.

14.5 Minimum Size

- Full logo with tagline: minimum 150px wide on mobile
- Full logo without tagline: minimum 120px wide on mobile
- Icon-only logo: minimum 32px wide
- App icon version: should be simplified and tested at very small sizes

14.6 Background Rules

Preferred backgrounds are white, soft cream, or very light aqua. If the logo is placed on photography, use a soft overlay or place it inside a clean white/cream area.

15. Incorrect Logo Usage

Do not stretch the logo. Do not rotate it. Do not recolor it with unrelated colors. Do not place it on low-contrast backgrounds. Do not add heavy shadows, outlines, or glow effects. Do not place the full logo over a busy image without an overlay. Do not separate the symbol and wordmark in a way that weakens recognition. Do not use the tagline at tiny sizes where it becomes unreadable.

16. Typography System

Typography must support clarity, trust, and accessibility. Since PhysioHome is a healthcare product, readability is more important than decoration.

16.1 Recommended Font Families

Preferred UI fonts:

- Inter
- Manrope
- Plus Jakarta Sans
- Nunito Sans

The strongest recommendation is **Manrope** for a warm modern healthcare feel, or **Inter** for maximum clarity and product consistency.

16.2 Typography Personality

Headings should feel confident and calm. Body text should feel helpful and easy to read. Buttons should feel clear and action-oriented. Avoid thin, decorative, or overly playful fonts.

17. Typography Scale

17.1 Mobile Typography

Element	Size	Weight	Line Height	Color	Usage
Display / Hero	34–40px	800	1.05–1.15	#0B2545	Onboarding and hero headlines
H1	28–32px	800	1.15	#0B2545	Main screen titles
H2	22–24px	700	1.25	#0B2545	Section headings
H3	18–20px	700	1.3	#0B2545	Card titles, provider names
Body Large	17–18px	500	1.45	#0B2545	Intro and hero supporting copy
Body	15–16px	400–500	1.5	#0B2545	General content

Element	Size	Weight	Line Height	Color	Usage
Caption	12–13px	400–500	1.4	#707588	Metadata, helper text
Button	16–18px	700	1.2	#FFFFFF	Primary CTAs

17.2 Web and Dashboard Typography

Element	Size	Weight	Usage
Web Hero	48–64px	800	Landing page hero headlines
Page H1	36–44px	800	Main web page headings
Section H2	28–36px	700	Website and dashboard sections
Card Title	18–22px	700	Dashboard cards and marketing cards
Body	16–18px	400–500	Paragraphs and UI descriptions
Small Text	13–14px	400–500	Labels, metadata, helper text

17.3 Typography Rules

Use Primary Navy for important text. Use Primary Teal only for emphasis, links, and action text. Do not use all caps for long headings. Do not use thin font weights for healthcare instructions. Keep mobile paragraphs short.

18. Voice and Tone

The PhysioHome voice should be professional, reassuring, simple, and human. It should sound like a helpful healthcare coordinator, not a hospital form, not a sales agent, and not a casual social app.

18.1 Voice Principles

Speak clearly. Reassure without exaggerating. Guide users step by step. Avoid medical claims that sound like guaranteed outcomes. Respect the user's situation. Use simple language.

18.2 Tone by Context

For onboarding, the tone should be warm and inviting. For booking, it should be clear and action-focused. For payment, it should be secure and precise. For errors, it should be calm and helpful. For clinical content, it should be responsible and cautious.

18.3 Words to Use

Use words such as verified, trusted, professional, care, recovery, support, home, safe, guided, convenient, mobility, rehabilitation, comfort, session, physiotherapist, and treatment.

18.4 Words to Avoid

Avoid cheap, instant cure, guaranteed recovery, miracle, quick fix, best in the world, emergency rescue, diagnosis, and any phrase that overpromises clinical outcomes.

19. Messaging Framework

19.1 Main Brand Message

Professional physiotherapy care at home.

19.2 Supporting Message

Book verified physiotherapists near you for home-based treatment, recovery, and mobility support.

19.3 Benefit Messages

- Verified experts you can trust
- Care delivered at your doorstep
- Easy booking in minutes
- Secure payments through trusted channels
- Recovery support from qualified professionals

19.4 CTA Library

Use direct, clear CTAs:

- Get Started
- Book Now
- Book a Session
- Find Available
- Find a Physiotherapist
- Continue
- Confirm Booking
- Pay Now
- Track Booking
- Submit Verification
- View Profile
- View All

Avoid vague CTAs such as “Explore More” when the user needs a specific action.

20. Approved Copy Examples

Verification Message

Your documents have been submitted for review. We'll notify you once your verification status is updated.

Payment Confirmation

Payment received. Your booking is now confirmed.

Error Message

We could not complete your booking. Please check your details and try again.

21. Imagery Direction

Photography is a major part of the PhysioHome brand. The imagery must make the service feel trustworthy, warm, and real.

21.1 Image Style

Images should feel natural, bright, warm, and human. The ideal setting is a clean home environment with natural light, indoor plants, soft furnishings, and a calm patient-care interaction.

21.2 Recommended Image Subjects

Use images of physiotherapists helping elderly patients, patients doing guided mobility exercises, post-surgery rehabilitation, stroke recovery support, sports injury therapy, caregivers observing therapy, physiotherapists carrying simple equipment, and smiling patients after progress milestones.

21.3 Color Coordination in Images

The physiotherapist's clothing should ideally include teal or turquoise tones that match the brand. The home environment should include warm earth tones, soft cream, natural wood, plants, and terracotta accents. These colors support the UI palette without becoming official interface colors.

21.4 Image Treatment

For hero images, apply a soft cream or white gradient overlay where text appears. Avoid placing navy text directly on busy image areas. Keep faces and care interactions visible.

21.5 Images to Avoid

Avoid cold hospital corridors, dramatic emergency imagery, dark medical scenes, cluttered rooms, overly staged stock photos, exaggerated pain expressions, and images that feel unsafe or unprofessional.

22. Iconography System

Icons should be simple, rounded, line-based, and healthcare-friendly. They should match the visual style used in the approved home screen.

22.1 Icon Style

Use clean outline icons with rounded corners and consistent stroke width. Icons should be recognizable at small sizes and should not contain unnecessary detail.

22.2 Icon Colors

- Primary icon color: Primary Teal `#138A8A`
- Icon background: Light Teal Tint `#E6F4F4`
- Icon label text: Primary Navy `#0B2545`

22.3 Icon Container

Use soft rounded squares or rounded rectangles. Recommended size on mobile is 56px to 72px. Recommended border radius is 16px to 22px.

22.4 Approved Icon Concepts

- Shield check: Verified Experts
- Home: Care at Home
- Calendar: Easy Booking
- Card or wallet: Secure Payments
- Location pin: Nearby Providers
- Star: Ratings
- Bell: Notifications

- Chat bubble: Messages
 - User: Profile
 - Calendar check: Confirmed session
-

23. UI Kit Overview

The UI kit must preserve the calm healthcare feeling of the brand. Components should be spacious, rounded, readable, and clear.

23.1 Buttons

Primary buttons should use Primary Teal or the approved teal gradient. They should have white text, bold labels, and optional right-arrow icons.

Recommended mobile button specifications:

- Height: 56px to 64px
- Border radius: 18px to 24px
- Text weight: 700
- Horizontal padding: 20px to 28px
- Icon: right side for forward movement

Secondary buttons should use a white background, navy text, and a teal outline. They are useful for actions such as How It Works or View Details.

Destructive buttons should use Error Red only when the action is genuinely destructive, such as cancel booking.

23.2 Cards

Cards should use white backgrounds, soft shadows, subtle borders, and rounded corners. Avoid heavy shadows and dark outlines.

Recommended card specifications:

- Background: #FFFFFF
- Border: #D9DDE3 at low opacity
- Radius: 18px to 24px
- Padding: 16px to 20px
- Shadow: soft and minimal

23.3 Forms and Inputs

Input fields should feel clean and safe.

Recommended input specifications:

- Background: #FFFFFF
- Border: #D9DDE3
- Focus border: #138A8A
- Label: #0B2545
- Placeholder: #707588
- Error text: #EF4444
- Radius: 12px to 16px
- Minimum height: 48px

23.4 Navigation

The active navigation item must use Primary Teal. Inactive items should use Muted Slate. The bottom navigation should be simple, with icons and labels.

Recommended navigation items:

- Home
- Bookings
- Messages
- Profile

23.5 Badges and Status Pills

Status pills should use functional colors carefully.

Examples:

- Approved: green tint with Success Green text
- Pending: amber tint with Warning Amber text
- Cancelled: red tint with Error Red text
- Active: light teal tint with Primary Teal text

23.6 Progress Indicators

Use Primary Teal for active states and Light Gray for inactive states. This applies to onboarding dots, booking steps, verification steps, and payment progress.

24. Layout and Spacing System

PhysioHome should feel spacious and calm. Crowded layouts reduce trust, especially in healthcare.

24.1 Spacing Rules

Recommended mobile screen padding: 20px to 24px

Recommended card padding: 16px to 20px

Recommended section gap: 24px to 40px

Recommended small element gap: 8px to 12px

24.2 Rounded Corners

Small elements: 10px to 12px

Inputs: 12px to 16px

Cards: 18px to 24px

Primary buttons: 18px to 24px

Icon containers: 16px to 22px

24.3 Shadow Rules

Use shadows subtly. Healthcare UI should feel clean, not flashy. Cards may use very soft shadows to create separation from the white background.

25. Accessibility Guidelines

PhysioHome must be usable by patients, elderly users, caregivers, and people in discomfort. Accessibility is part of the brand.

25.1 Practical Accessibility Rules

Use at least 16px body text. Use large tap targets of at least 44px. Keep primary actions clearly visible. Do not rely on color alone to communicate errors or status. Use labels with icons. Maintain strong contrast between text and background. Avoid faint gray for important copy.

25.2 Color Accessibility Rules

Important text should use Primary Navy. Primary CTAs should use white text on teal. Muted Teal should not be used for long body copy. Light Teal Tint should only be used as a background, not a text color. Gray should only be used for inactive or secondary information.

26. Application: Patient Mobile App

26.1 Home Screen

The home screen should use a clean white background, a hero card with warm imagery, navy headlines, teal highlight text, teal primary CTA, and soft feature icon cards.

Recommended sections:

- Header with logo and notification icon
- Hero card with “Professional Physiotherapy Care at Home”
- Feature benefits row: Verified Experts, Care at Home, Easy Booking, Secure Payments
- Popular Services
- Top Rated Physiotherapists
- Quick booking CTA panel
- Bottom navigation

26.2 Booking Screen

The booking screen should be simple and structured. Use navy section titles, white cards, teal selected states, and clear step indicators.

26.3 Payment Screen

The payment screen should emphasize security. Use navy for amount and booking details, teal for Pay Now, and clear feedback for pending or successful payment.

26.4 Profile Screen

The profile screen should feel calm and organized. Use white cards, navy labels, muted slate metadata, and teal icons.

27. Application: Physiotherapist App

The physiotherapist app should use the same brand palette but with a slightly more professional dashboard feel.

Recommended elements:

- Navy dashboard heading
- Teal active booking buttons
- White booking request cards
- Status badges for pending, accepted, completed, and cancelled
- Soft aqua panels for earnings or verification status
- Clear CTA for updating availability

The physiotherapist app should never feel like a separate brand. It should feel like a professional side of the same PhysioHome ecosystem.

28. Application: Admin Dashboard

The admin dashboard may use more structure, but it must remain visually connected to the brand.

Recommended usage:

- Navy sidebar or top headings
- Teal highlights for active filters and key actions
- White data cards
- Muted slate secondary labels
- Functional colors for operational statuses
- Minimal use of warm cream because admin work is more operational than emotional

Admin screens should prioritize clarity, data readability, and status visibility.

29. Application: Website and Landing Pages

The website should use the strongest version of the brand story.

Recommended landing page structure:

- Hero section with warm home physiotherapy image
- Navy headline with teal highlight
- Teal CTA button
- Trust badges showing verified professionals, home care, easy booking, secure payments
- Popular services section
- How it works section
- Physiotherapist quality section
- Patient testimonials
- Final CTA section

The website should feel polished, premium, and healthcare-trustworthy without becoming overly corporate.

30. Application: Social Media and Marketing Materials

Marketing materials should use the same color hierarchy.

Recommended poster formula:

- Cream or white background
- Warm home-care image
- Large navy headline
- Teal highlight phrase
- Soft aqua feature strip

- Teal CTA
- Clear contact or website information

Example Poster Headline

Professional Physiotherapy Care at Home

Example Supporting Copy

Book verified physiotherapists near you for treatment, recovery, and mobility support.

Example CTA

Book Your Session Today

31. Application: App Store and Play Store Assets

App store screenshots should show the strongest product benefits:

1. Book physiotherapy care at home
2. Find verified physiotherapists
3. Schedule and track sessions
4. Pay securely
5. Manage recovery support

Use navy headlines, teal highlights, white screen mockups, and warm cream backgrounds.

32. Design Tokens

```
export const colors = {
  primaryTeal: '#138A8A',
  tealDark: '#087F83',

  softCream: '#F6ECDD',
  white: '#FFFFFF',
  lightGray: '#D9DDE3',
  mutedSlate: '#707588',
  success: '#22C55E',
  warning: '#F59E0B',
  error: '#EF4444',
  info: '#2563EB',
};
```

```

export const typography = {
  fontPrimary: 'Manrope',
  fontFallback: 'Inter',
  display: { fontSize: 40, fontWeight: '800', lineHeight: 46 },
  h1: { fontSize: 32, fontWeight: '800', lineHeight: 38 },
  h2: { fontSize: 24, fontWeight: '700', lineHeight: 30 },
  h3: { fontSize: 20, fontWeight: '700', lineHeight: 26 },
  body: { fontSize: 16, fontWeight: '500', lineHeight: 24 },
  caption: { fontSize: 13, fontWeight: '500', lineHeight: 18 },
  button: { fontSize: 17, fontWeight: '700', lineHeight: 22 },
};

export const radii = {
  sm: 10,
  md: 16,
  lg: 22,
  xl: 28,
  pill: 999,
};

export const spacing = {
  xs: 4,
  sm: 8,
  md: 16,
  lg: 24,
  xl: 32,
  xxl: 40,
};

export const shadows = {
  softCard: {
    shadowColor: '#0B2545',
    shadowOpacity: 0.08,
    shadowRadius: 16,
    shadowOffset: { width: 0, height: 8 },
    elevation: 4,
  },
};

```

33. Brand Consistency Checklist

Before approving any PhysioHome design, check the following:

- Does it use Primary Navy for headings and important text?

- Does it use Primary Teal for CTAs, links, active states, and highlights?
 - Does the screen preserve enough white space?
 - Are icon backgrounds using Light Teal Tint?
 - Does the design feel warm, professional, and healthcare-focused?
 - Is the primary action obvious?
 - Are images warm, home-based, and realistic?
 - Are healthcare claims responsible and not exaggerated?
 - Is the typography readable on mobile?
 - Are touch targets large enough?
 - Are inactive states quiet but visible?
 - Does the design avoid unnecessary colors?
 - Would an elderly patient or caregiver understand the next step?
-

34. Do and Do Not Rules

Do

Use navy for trust and readability. Use teal for action and healing energy. Use cream for warmth. Use white for clarity. Use soft aqua for supportive icon surfaces. Use warm home-care photography. Use clear language. Keep screens spacious. Use rounded UI components. Keep the brand consistent across patient, physiotherapist, admin, web, and marketing materials.

Do Not

Do not use random blues, greens, purples, or neon colors. Do not replace navy with black-heavy layouts. Do not overuse teal until the interface feels overwhelming. Do not use tiny text. Do not use harsh shadows. Do not place text over busy photos without overlays. Do not overpromise medical outcomes. Do not make the app look like a generic delivery, fitness, or hospital management app.

35. Final Brand Direction

PhysioHome should look and feel like a trusted healthcare companion for home recovery. It should combine the authority of professional physiotherapy with the warmth of care delivered at home.

The approved brand logic is simple:

- Teal means action, healing, availability, and movement.
- Navy means trust, professionalism, structure, and readability.
- Light teal tint means gentle support and healthcare softness.
- Cream means home comfort and warmth.
- White means clarity, cleanliness, and app usability.
- Gray means inactive or secondary information.

Every screen, poster, website section, app store asset, and communication should answer one emotional question for the user: "Can I trust this service with my care or my loved one's care?"

Every color, word, photo, icon, button, and layout decision should help the user answer yes.
